

Perlite - Horticulture

If the soil structure needs to be optimised and plant growth encouraged, perlite, mixed with potting soil or used as a substrate in hydroponic growing systems, offers an ideal solution.

Why choose perlite to optimise the structure of your soils?

- ✓ **Lightweight** and easy to handle, it is ideal for potting mixes and cuttings.
- ✓ **Inert, inorganic.**
- ✓ Approved for organic growing.
- ✓ Ensures a good balance between **water and air**.
- ✓ **Good drainage capacity.**

Form	Granules
Colour	White
Density	Between 80 - 90 ± 20% kg/m ³
pH	6-8.5
Granulometry	0 to 6 mm
Flammability	Non-flammable, Inorganic
Melting point	1400° C
Hygroscopicity	<1.5% by weight
