FOR OUTDOOR USE ONLY.

WHY IT'S SO INNOVATIVE AND SO WORTH TO USE IT?

The basis of CoverPrime are buckwheat husks which are perfect material in terms of mulching. Thanks to that it's a very light, loose structure product which ensures easy and precise dosing both machine and manual. When applied creates a long-lasting shell structure that is permeable to water, air and fertilizers, what is extremely important - having no effect on plant growth. It also reduces water evaporation and overdrying soil in the pots.

BENEFITS FOR NURSERIES:

CoverPrime combines everything that producers of nursery material expect:

- significant reduction of weeds growth;
- remarkable efficiency - effective thickness layer at only 5-6 mm;
- labour costs saving and cut of losses related to weeding;
- shell structure - no loss when pots are overturned;
- permeable to water, air and fertilizers;
- reduction of water evaporation and pots drying out;
- loose, light and easy to use;
- 100% biological product - totally free of weed seeds, pests, heavy metals etc.;
- no adverse effect on plant growth and health;
- usage possible in both options: pots and trays;
- aesthetic appearance of plants at selling points guaranteed.
